

### Quarter Quartz Element

Quartz infrared heating elements provide medium wave infrared radiation. They are favoured in industrial applications where a more rapid heater response is necessary, including systems with long heater off cycles. The standard quartz heating elements range consists of cassette style elements constructed with aluminised steel as standard, stainless steel is also an option. These emitters have peak emissions in the medium to long wavelength range.

### Technical specification

Material	Polished aluminium clad steel body with an ironchrome aluminium resistance wire
Heater Voltage	230 V ( <i>standard</i> )
Useful wave-length range	1.5 - 8 $\mu\text{m}$ ( <i>microns</i> ) - Long wave
Dimensions	62.5 x 62.5 x 22.5 mm
Average weight	139 g
Electric connection	120 mm ceramic beaded power leads
Assembly	Recommended radiation distance from heater is 100 - 200mm
Mounting	2 x M5 x 30 mm fixing
Element spacing	Minimum spacing between elements 5 mm
Average operating life	Up to 5,000 hrs depending on conditions
Standards	CE
Operating temperature	Ensure temperature of aluminium clad steel body does not exceed 500 °C
Note	Element should always be mounted so the quartz glass tubes are horizontal.

### Standard QQE range

	Mean Surface Temperature °C	Max Power Density kW/m <sup>2</sup>
125 W	593	29
250 W	772	58

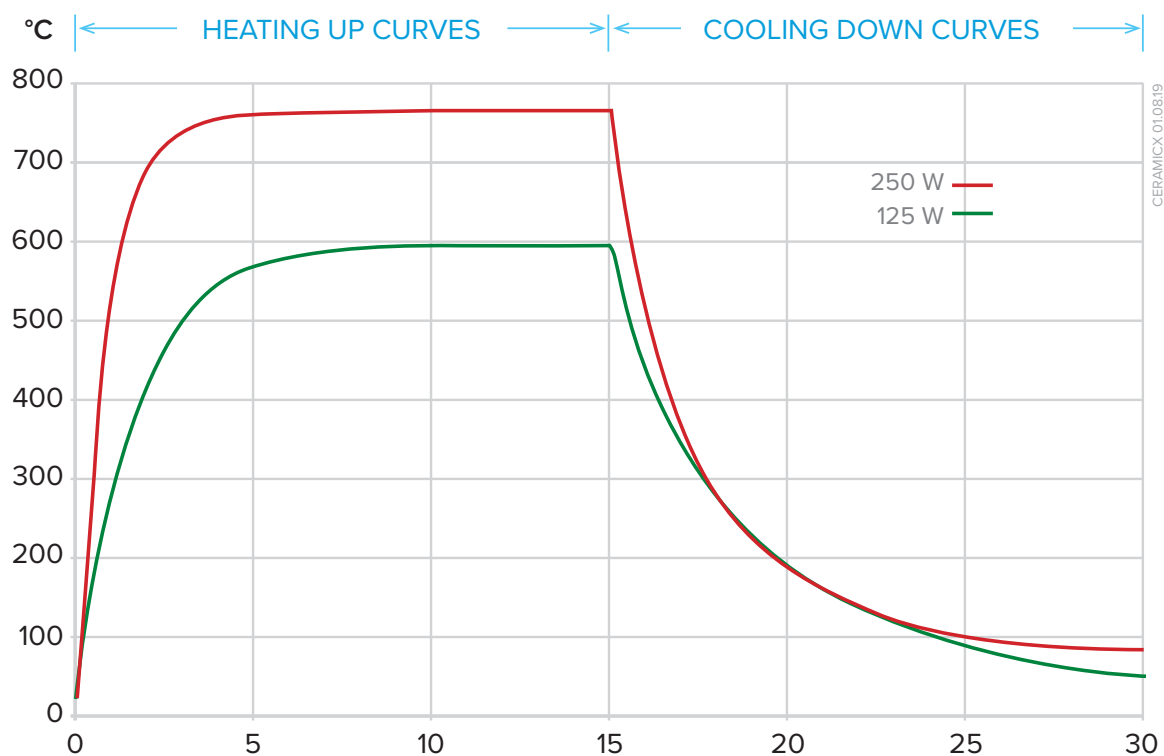

#### QQE QUARTER QUARTZ ELEMENT

Average Weight 136g  
Tolerances apply, all dimensions mm.  
Heater body manufactured from 0.75 mm  
polished aluminised steel ( 500°C max )

25W32

**QQE** Heat up and cool down curves showing average surface temperature measured with a thermal imaging camera set to an emissivity of 0.7
